LibraLogic BI Catalyst Platform

The power of aggregated data.
One BI dashboard for all your data sources.

LibraLogic Sobieski, Knap Spółka Jawna · Warsaw, Poland

ARCHIVAL — For reference only

1 / 13

THE PROBLEM**Data overload is now the norm**

Every day you work with at least a handful of applications — email, web browsing, proposal writing, sales tracking, purchase monitoring. Switching between windows, taking notes, sending emails to clients. Trying to pull it all together in Excel.

By connecting access to selected applications and the data they contain, you can save time and gain additional insight — insight that slips away when you're juggling each tool separately.

See over the next 10 slides how you can change the way you work.

DAILY WORKFLOW**Do you do this every day — or every week?**

Prepare a presentation. Gather materials and notes. Hold a meeting. Then write up the notes, put them in a document, send them to attendees...

By connecting access to selected applications and the data they contain, you can save time and gain additional insight — insight that slips away when you're managing each tool separately.

See over the next slides how you can change the way you work.

SOLUTION

Speed up your work in 3 steps

In today's information overload, a spreadsheet or plain Excel simply isn't enough. You need an application that serves as a reporting system — one that lets you plan and analyse your company's activities.

This is what a business intelligence platform looks like in practice — a class of solutions oriented toward effective data management.

01

Collect

Gather relevant information from all sources in one place.

02

Prepare

Format and structure your data any way you need.

03

Share

Distribute insights to colleagues, clients, and stakeholders.

01

STEP 1

Collect relevant information in one place

STEP 1 — COLLECT**One data warehouse. Every source.**

BI solutions convert raw data into actionable information using dedicated reporting and analytics tools.

- Access critical data from multiple sources via the BI Catalyst data warehouse.
- Store everything in a single, secure, optimised warehouse — queries run in a fraction of the time compared to traditional distributed databases or files on network drives.
- No need to worry about VPN or network drive access when working remotely.
- Historical data is always complete — revisit any past week and analyse it from a fresh angle for different goals, reports, or presentations.

STEP 2 — PREPARE

Prepare what you need — in any format

With access to all your data at any time, through a single BI Catalyst application, from anywhere with an internet connection, you can produce any presentation format you need:

- **Presentations** — export to PPT or PDF; connect your company's own templates.
- **Charts** — export any chart to JPG, GIF, or other image formats.
- **Spreadsheets** — export to Excel or CSV for further analysis.

Define with us exactly what you want to import into the platform and how.

STEP 3 — SHARE

Share your insights with others

With the LibraLogic platform, you can share the results of your work in any format you specify — or more simply:

- Grant a client access to a dedicated account view within the application — showing them exactly the data and commentary they need.
- Use BI Catalyst as a live presentation tool during meetings and online conferences.

Explore the possibilities of dedicated business intelligence solutions — tailored and built for you by LibraLogic specialists.

PLATFORM FEATURES

Localisation & white-label customisation

The BI Catalyst analytics platform ships with two interface languages: **Polish and English**. Any additional language can be added based on client requirements.

The same applies to visual branding — the application UI can be fully customised:

- Company logo integration
- Corporate Identity colour scheme
- Custom styling based on client-supplied brand materials

DEPLOYMENT OPTIONS

How can you use LibraLogic BI Catalyst?

You decide how you want to power, maintain, and develop your analytics platform. Two deployment models are available:

- **On-premise:** Deploy within your own IT infrastructure. LibraLogic handles implementation, integration, and rollout.
- **SaaS:** No internal resources, staff, or infrastructure investment required. Access the application via any web browser — start saving time and working from anywhere, immediately.

Contact LibraLogic — we'll help you define the optimal solution for your needs.

TECHNICAL REQUIREMENTS

What software and hardware does BI Catalyst require?

On the user side: any modern web browser. The system meets leading HTML standards and requires no additional software installed on the user's machine. Flash and JavaScript must be enabled in the browser.

SaaS model — no additional investment in hardware or software required:

- No servers to purchase or maintain
- No software licences to manage
- Access from any device with an internet connection
- LibraLogic manages hosting, updates, and uptime
